

A perspective view of a cylindrical device. The main body is a dark cylinder labeled 10. A helical structure, labeled 11, is wound around the upper portion of the cylinder. This helical structure consists of a series of overlapping, curved segments. A label 12 points to one of these segments. At the top of the helical structure, there is a small, curved, hook-like element labeled 13. A label 14 points to the tip of this element. Other labels include 15, 16, and 17, which point to different parts of the helical structure's segments.
